Phylum arthropods is made up of subphylum chelicerata. Subphylum chelicerata is characterized by two parts called prosoma and opisthoma. The prosoma and cephalothorax are sensory, feeding, and locomotor tagma. The chelicerae is the first appendage and refers to the pincerlike. The pedipalps are the 2nd pair of appendages, and they are used for sensory purposes: feeding, locomotion, and reproduction.

Sentence Method Notes

FINITE AUTOMATA AND REGULAR LANGUAGES

Deterministic finite accepters, a.k.a. DFAs (Section 2.1)

An automaton without internal storage, gives yes/no output.

Example

State pointed by the short arrow - initial state.

Double circles - final states.

When processing a string, we start in the initial state and follow edges according to the symbols, until reaching the end of the string.

Example: aab

If a string leads to a final state (double circle), it is accepted; that is, the automaton gives the "yes" answer.
